Live slideshow

Print booth

Photo alerts

Event report

Marketplace

START HERE

NinjaPic in *60 seconds*

You upload. Guests scan one QR at the venue, take a quick selfie and see only the photos they are in. No app, no WhatsApp groups, no “bhai woh photo bhej do”.

1

Create the event

Name, date, and the functions: Haldi, Mehndi, Anand Karaj...

2

Put it on your QR

Your QR never changes. Print it once in a design you like.

3

Upload photos

From phone or laptop, by you or your team, function by function.

4

Guests find theirs

Selfie → only their photos, full quality download.

01	Getting started	3	02	Events and functions	4
	Sign up, approval, your dashboard			Haldi, Mehndi, Sangeet as albums inside one event	
03	Your QR and print designs	5	04	From camera to NinjaPic	6
	Seven ready designs, A3 to table cards			Phone, Wi-Fi app, OTG card reader or laptop

	Your logo everywhere, new clients from NinjaPic				

01

Getting *started*

01 Create your studio

Go to ninjapic.com → Get started. Studio name, your name, email, mobile and city.

02 Wait for approval

Every studio is checked by NinjaPic, usually within a day. Then log in with your email or mobile.

03 Install the app

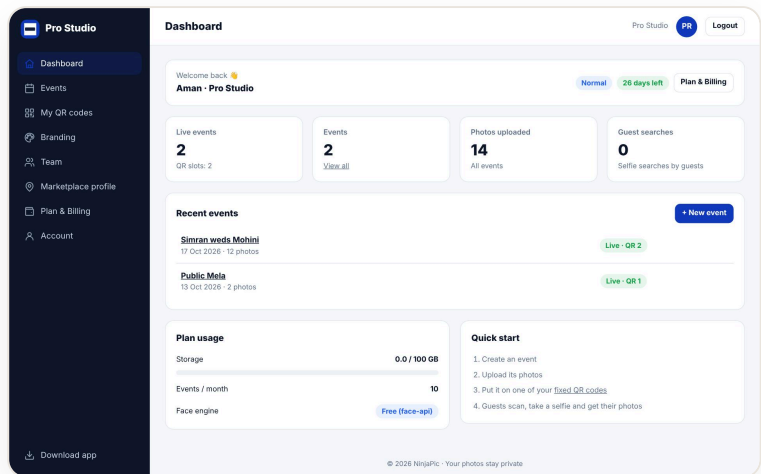

On the dashboard tap “Download app”. It opens like a normal app from your home screen.

04 Fill your marketplace profile

A short pop-up asks for your shop, price and best work, so couples can find you.

TIP

Log in on your laptop for big uploads and on your phone at the venue. Both stay logged in for 7 days.

Your dashboard: live events, photos uploaded, guest searches and plan usage.

Your menu

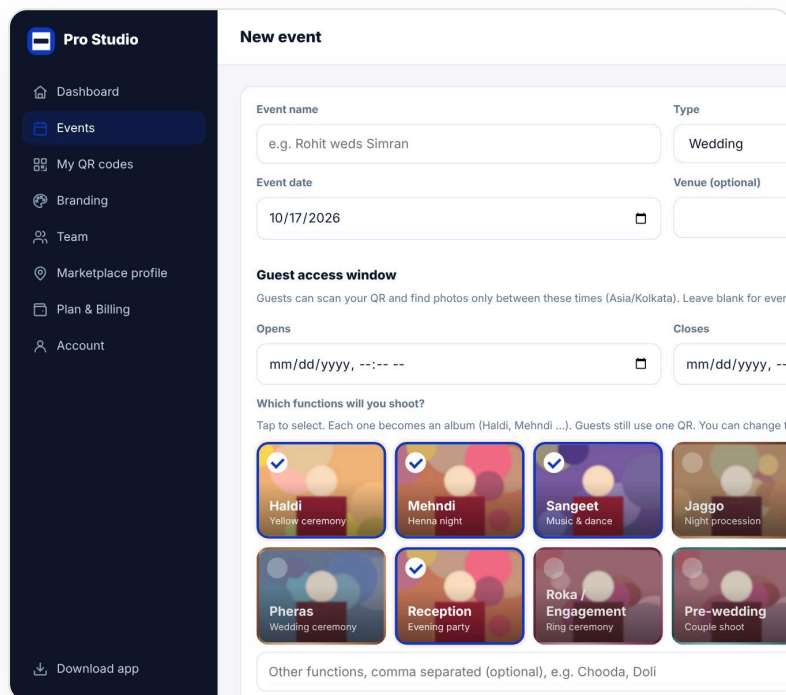

Events create and manage weddings and functions. **My QR codes** your fixed QR codes and print designs. **Branding** logo, colour, watermark and your own app name. **Team** upload logins for your second shooters.

Marketplace profile how couples see you on “Hire a photographer”. **Plan & Billing** storage, live events and renewal. **Account** password and contact details.

02

One event, *every function*

Make one event per wedding, for example "Simran weds Mohini". Inside it, each function is its own album with its own cover. Guests still use one QR.

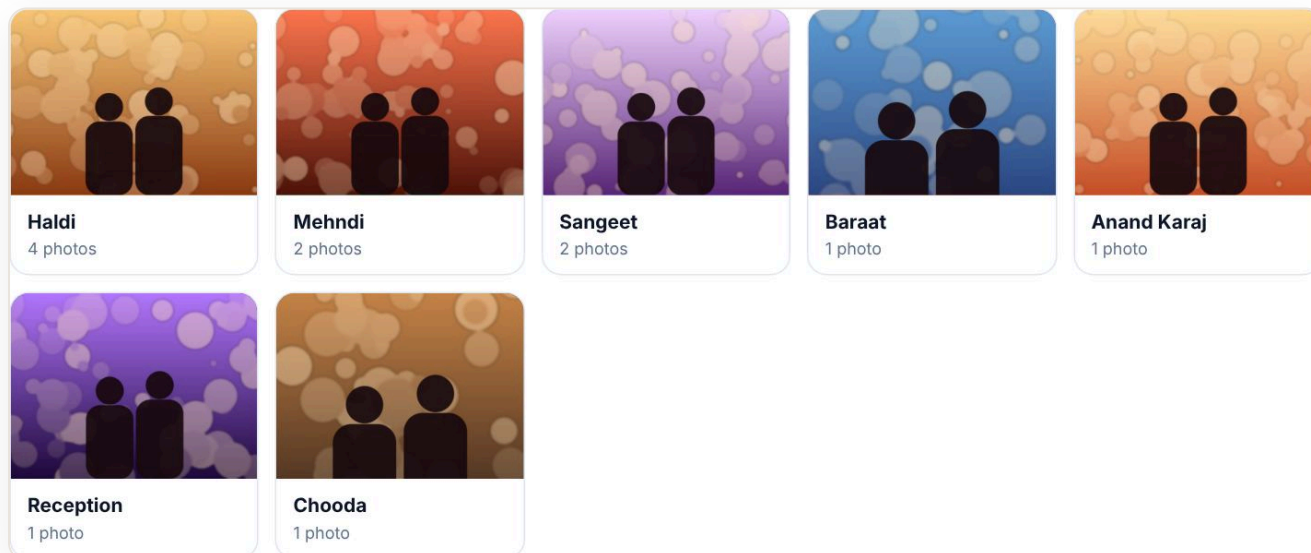

01 Events → New event
Name, type, date and venue.

02 Tick the functions
Haldi, Mehndi, Sangeet, Anand Karaj, Reception... each comes with a ready cover.

03 Choose privacy
Private (recommended): guests only see photos with their face.
Public: guests can also browse all.

04 Guest access window
When the QR opens and closes.
Leave blank for event day + 2 days.

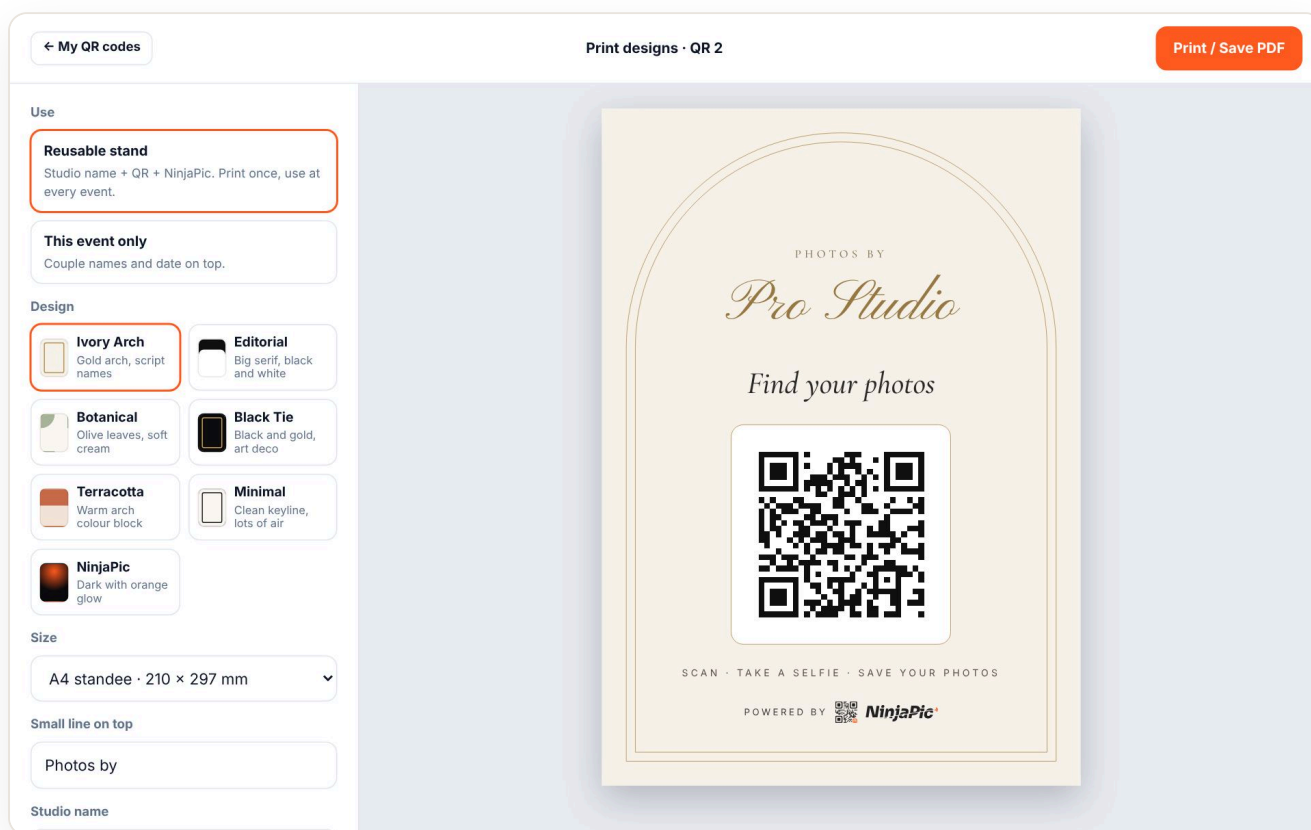

Functions inside the event. Add more any time (+ Add function), rename, hide from guests, or set your own cover from any photo.

03

Print once, *use forever*

Your QR codes never change. Put this week's wedding on QR 1, and next week's on the same QR. Your plan decides how many QR codes can be live at the same time.

My QR codes → Print designs: pick a design and size, edit the text, then Print / Save PDF.

Reusable stand (default)

Studio name + QR + "Powered by NinjaPic", no couple names or date, so one print works at every event. Choose **This event only** when you want the couple's names and date on a special stand.

Seven designs

Ivory Arch, Editorial, Botanical, Black Tie, Terracotta, Minimal and NinjaPic. Each comes in A4 standee, A5 table card, A3 welcome board, 100 mm square card and a tent card (A4, fold in half, readable from both sides).

Printing

Long studio or couple names fit by themselves: they move to two lines and the QR gives way a little, so nothing touches a frame line. Check the preview, it is exactly what prints.

Choose "Save as PDF" and send it to your print shop. 300 gsm matt card or acrylic looks premium. Do not shrink the page: the QR is sized to scan from a table.

TIP

Put one table card per 2–3 tables and a big standee at the entry, bar and stage.

04

From camera to *NinjaPic*

No laptop needed to start. Pick the way that fits your gear: every route ends in the same place, the event page on ninjapic.com, where you choose the function and the photos.

A

Phone only

Shoot on your phone, open the event on ninjapic.com in Chrome and tap **Choose photos**. Perfect for small events and for starting out.

ZERO EXTRA COST

B

Camera → phone by Wi-Fi

Pair the camera with its free app (Canon Camera Connect, Nikon SnapBridge, Sony Creators' App, Fujifilm XApp) and send the best JPEGs to the phone.

BEST FOR LIVE UPLOADS

C

SD card → phone (OTG)

A Type-C card reader (₹300–600) plugs into the phone. Open Files, select the photos, upload. Faster than Wi-Fi for 100+ photos.

FAST, CHEAP

D

Laptop

Card in the laptop, drag the whole folder onto the event page. Best for big weddings and for uploading after the event.

FASTEST FOR 1,000+

Camera settings that help

- Shoot RAW + JPEG**
Upload the JPEG (Fine, full size) now, edit the RAW later for the album.
- Turn off "resize" in the Wi-Fi app**
Otherwise the phone gets a 2 MP copy. Send the original size.
- Time and date right**
So photos sort correctly and functions stay in order.

At the venue

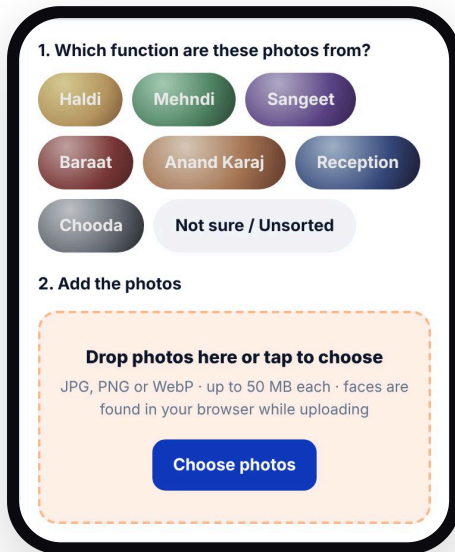

- Upload per function**
Choose Haldi, then the Haldi photos. Then Mehndi. No sorting later.
- Best first, in batches**
Pick 50–100 good shots and upload them while you keep shooting.
- Network**
Venue Wi-Fi is often weak: use mobile data or a hotspot. Keep the phone charged (power bank) and the page open.

TIP

Second shooter? Give them a Team login: they upload from their own phone the same way, and duplicates are skipped.

05

Upload, *with your team*

01 Open the event → choose the function

Every upload asks “Which function are these photos from?”, so nothing ends up unsorted.

02 Choose or drop photos

JPG, PNG or WebP up to 50 MB each. Hundreds at a time are fine.

03 Keep the page open

Faces are found on your device while uploading. When it says Done, guests can already find them.

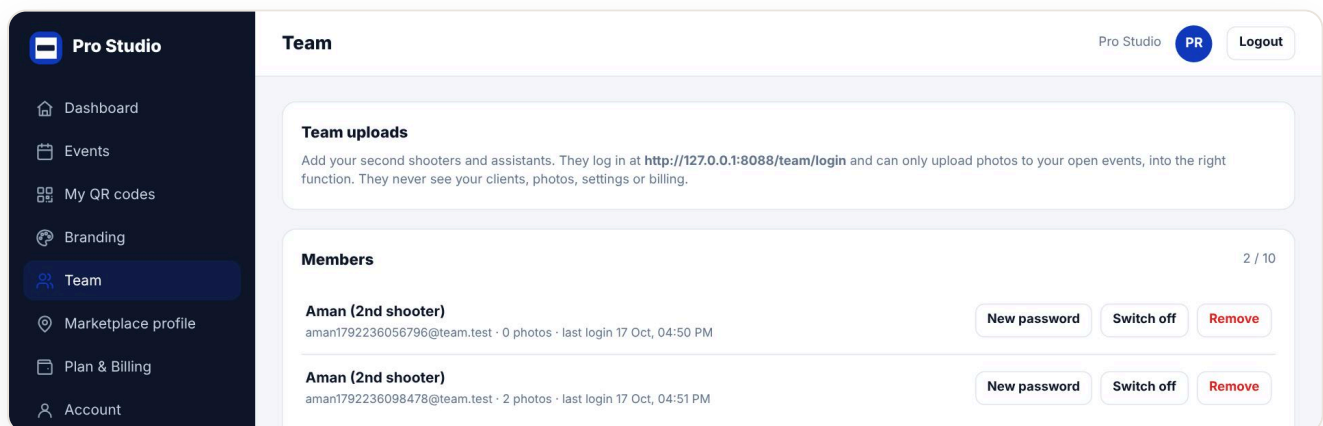

TIP

Wrong function? Select photos on the event page and use **Move to function**.

Team uploads

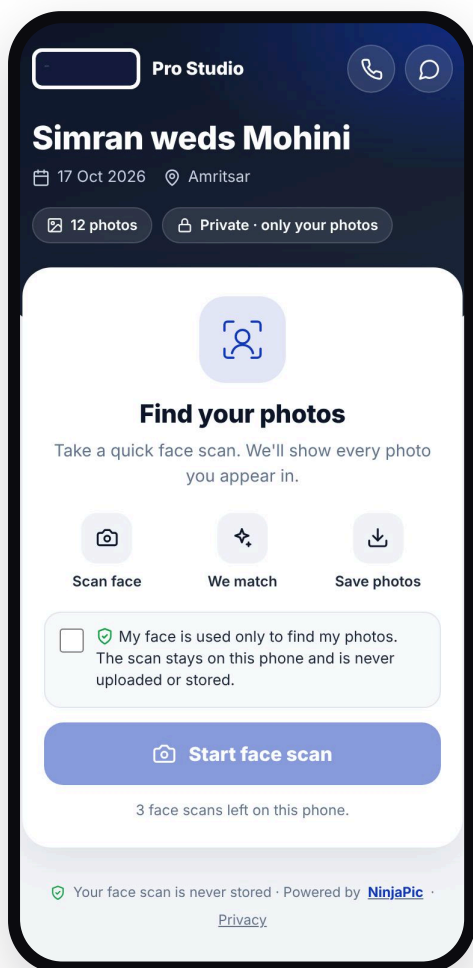

Studio → **Team** → add your second shooter with name and email. You get a password to send on WhatsApp. They log in at **ninjacpic.com/team/login** and can only upload to your open events. They never see your clients, photos, settings or billing. Switch them off any time.

No double uploads: a photo that is already in the event (same file, by you or anyone in the team) is skipped on its own, and the **Team activity** card shows live who uploaded how many photos to which function.

06

What your *guests* see

01 Scan the QR

With the normal phone camera. No app, no login.

02 Quick face scan

Look straight, turn left, turn right. This liveness check stops people from using someone else's photo.

03 Only their photos

Function by function, with Save HD and Download all.

04 Share

On phones that support it, guests share a photo straight to WhatsApp or Instagram with a small credit: "Photos by your studio · ninjapic.com".

GOOD TO KNOW

The selfie never leaves the guest's phone and is never stored. Explain this when guests ask: it builds trust.

Your name on every page

Your studio name and logo (with Branding) are on the guest page, plus call and WhatsApp buttons if you switch them on. Every happy guest is a future client. The first scan also plays a 5-second intro reel made from the event (your studio, the couple's names, functions, then "Powered by NinjaPic"). Pick Cinematic, Polaroid or Story reel on the event page.

07

Guests come back *on their own*

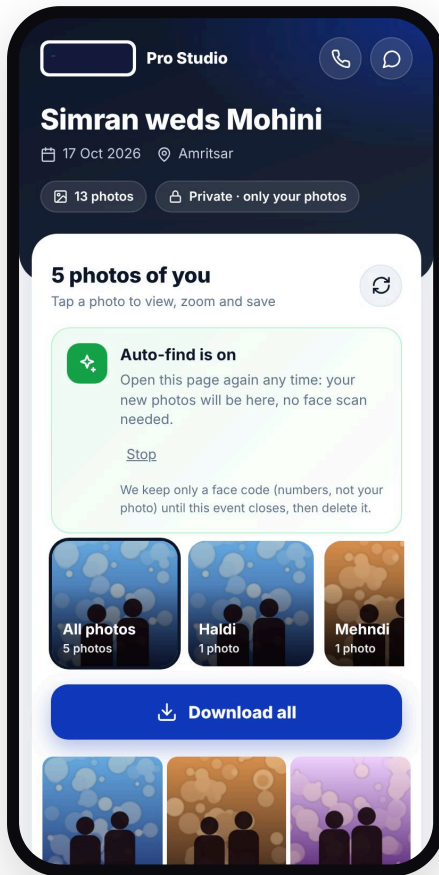

Photo alerts: no second face scan

After their scan, guests can tap **Turn on** under “Find my new photos automatically”. From then on:

- 01 **Open the page again**
Their photos, and every new one, are already there. No face scan, no tries used.
- 02 **Notification**
On Android (and on iPhone when the page is added to the home screen) they get “3 new photos of you” as soon as you upload them.
- 03 **Private by design**
Only a face code (numbers, not a photo) is kept, encrypted, and deleted when the event closes. Guests can tap Stop any time.

TIP

Tell guests at the venue: “Scan once, switch on alerts, and your photos come to you.” It brings them back to your page, and your name, again and again.

Feedback in one tap

After finding their photos, guests rate the experience with stars and quick tags (Easy to use, Fast, Found all my photos... or Some photos missing, Face scan was hard). One answer per phone. It all goes into your event report.

How was finding your photos?

★ ★ ★ ★ ★

08

The couple's *private album*

Guests see only their own photos. The couple (or the client of any event) gets everything: every function, also ones hidden from guests, with one link and a 4-digit PIN.

Client album

The couple / client gets the whole event, function by function, with a link and PIN. Guests still only see their own photos.

Copy link
Share on WhatsApp

PIN New PIN

Downloads: off · switch on
Switch off link

Album design Save

Opened 10 times · shows every function, also the ones hidden from guests.

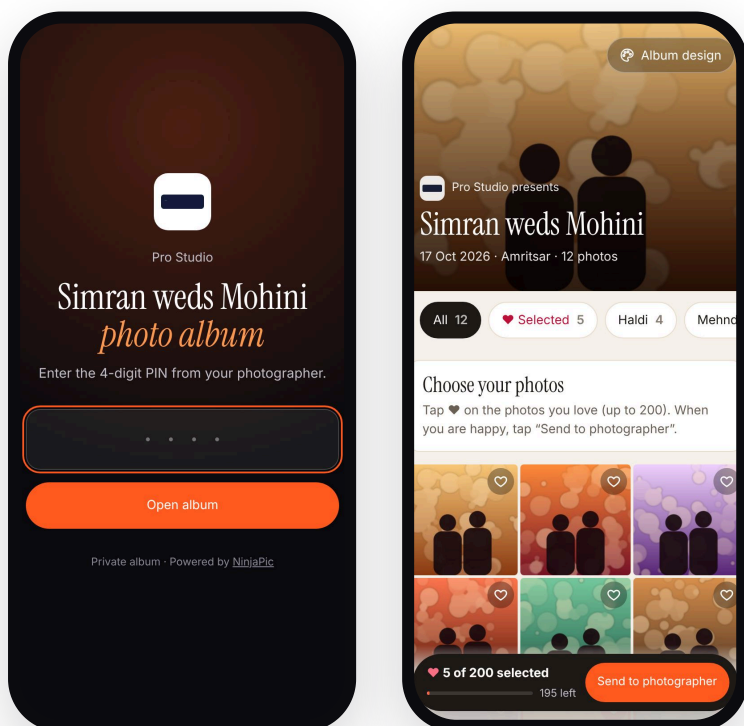

Photo selection

The couple taps ❤️ on the photos they want (e.g. for the printed album) and sends you the list. No more WhatsApp screenshots.

☒ Let the couple choose photos Limit Save

5 of 200 selected · still choosing

Event page → Client album: create the link, share it on WhatsApp with the PIN, change the PIN, switch downloads on or off.

Why couples love it

A beautiful album with your name on top, function tabs, a full-screen viewer and Download all as ZIP. Only people with the PIN can open it. Wrong PINs are blocked after a few tries.

Reviews that count

The album has a "Rate your studio" button. Only real clients (with the PIN) can review, so your marketplace rating is genuine.

09

Album designs and *photo selection*

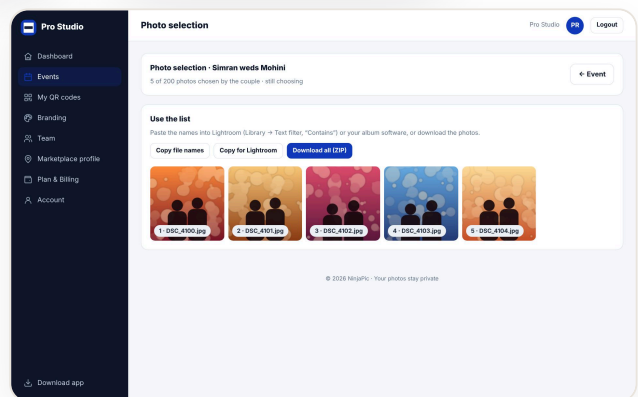

Six album designs

Ivory, Noir, Royal, Blush, Sage and Minimal, each with its own fonts and cover style. The couple taps **Album design** and chooses. You can preset one on the event page.

Photo selection for the printed album

No more coming to the studio again and again, or screenshots on WhatsApp. Switch on **Let the couple choose photos** and set a limit (for example 200). The couple taps ♥ on the photos they love and sees "112 of 200 selected · 88 left". When happy, they tap **Send to photographer**.

Event → Open selection: the chosen photos with file names.

- 01 **Copy for Lightroom**
Paste into Library → Text filter → Contains, to pick the same photos in your catalogue.
- 02 **Download all (ZIP)**
Original files, original names.
- 03 **Reopen for changes**
If the couple wants to swap a few.

10

Live on the *big screen*

Play the event on the venue LED, TV or projector while you shoot. New uploads appear on their own within seconds, labelled “Just in”, with your logo and the guest QR in the corner.

01 Event page → Live slideshow → Create link
Open it on a laptop connected to the screen.

02 Start full screen
Mixed cinematic transitions, slow zoom on photos, portraits shown side by side.

03 Keys
Space pause, ← → previous / next, F full screen. The screen stays awake.

Live slideshow

Play the photos on the venue TV or projector while you upload. New photos appear on their own, with your logo and the guest QR in the corner.

<http://127.0.0.1:8088/show/7d5sa9zv8x> [Copy link](#) [Open slideshow](#)

Each photo: 7 seconds ☐ Show guest QR [Save](#)

[New link](#) [Switch off](#)

Shows every photo except hidden photos and functions hidden from guests. Anyone with the link can watch, so share it only with the venue.

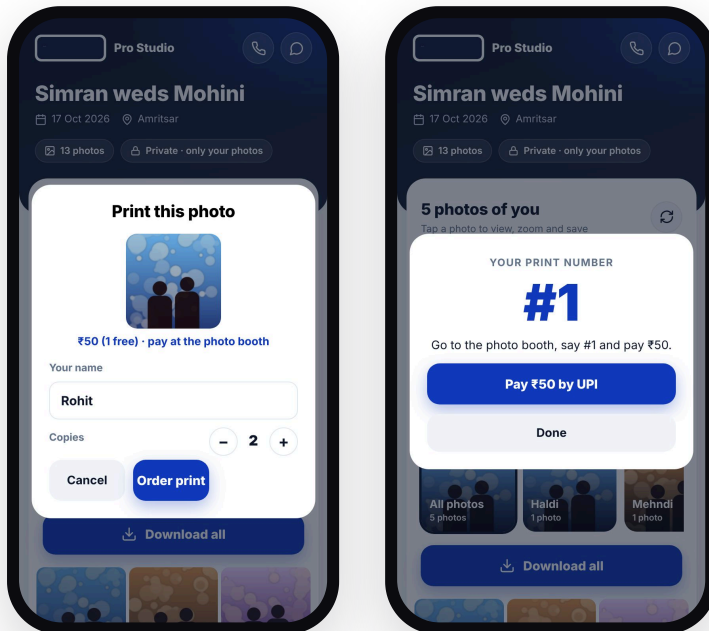

GOOD TO KNOW

Hidden photos and functions hidden from guests never appear. Anyone with the link can watch, so give it only to the venue team.

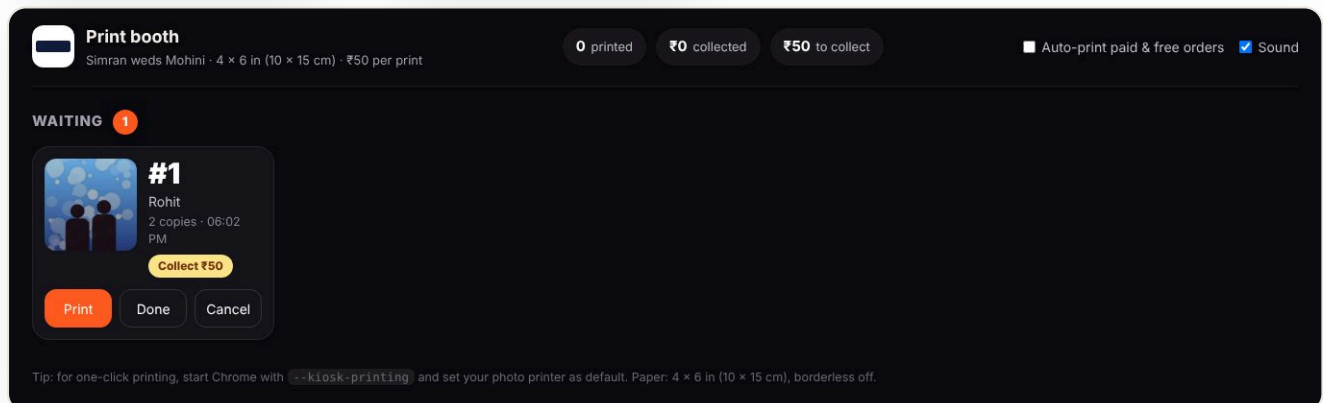

11

Instant *print booth*

Guests order a print of their own photo from their phone and collect it at your booth. You earn on every print, and every print carries your name.

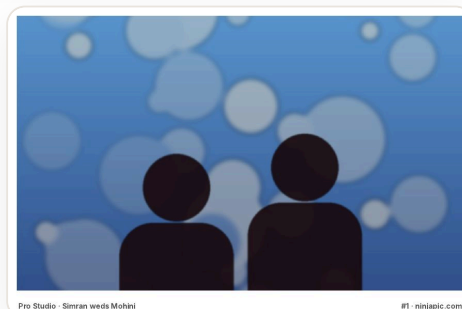

- 01 **Event page → Instant print booth**
Switch on, set the price per print, free prints per guest, size (4×6 or 5×7) and your UPI ID.
- 02 **Guest taps Print**
On any of their photos: name, copies, Order. They get a number like **#12** and can pay by UPI from the same screen.
- 03 **Your booth screen**
Open the booth link on the laptop connected to the photo printer. New orders appear with a sound.

Print, collect, done

Press **Print**: the photo comes out at the right size with a slim strip "Your studio · event · #12". Tap **Collect ₹50** when paid. The top bar shows printed, collected and still to collect. With **Auto-print**, paid and free orders print on their own.

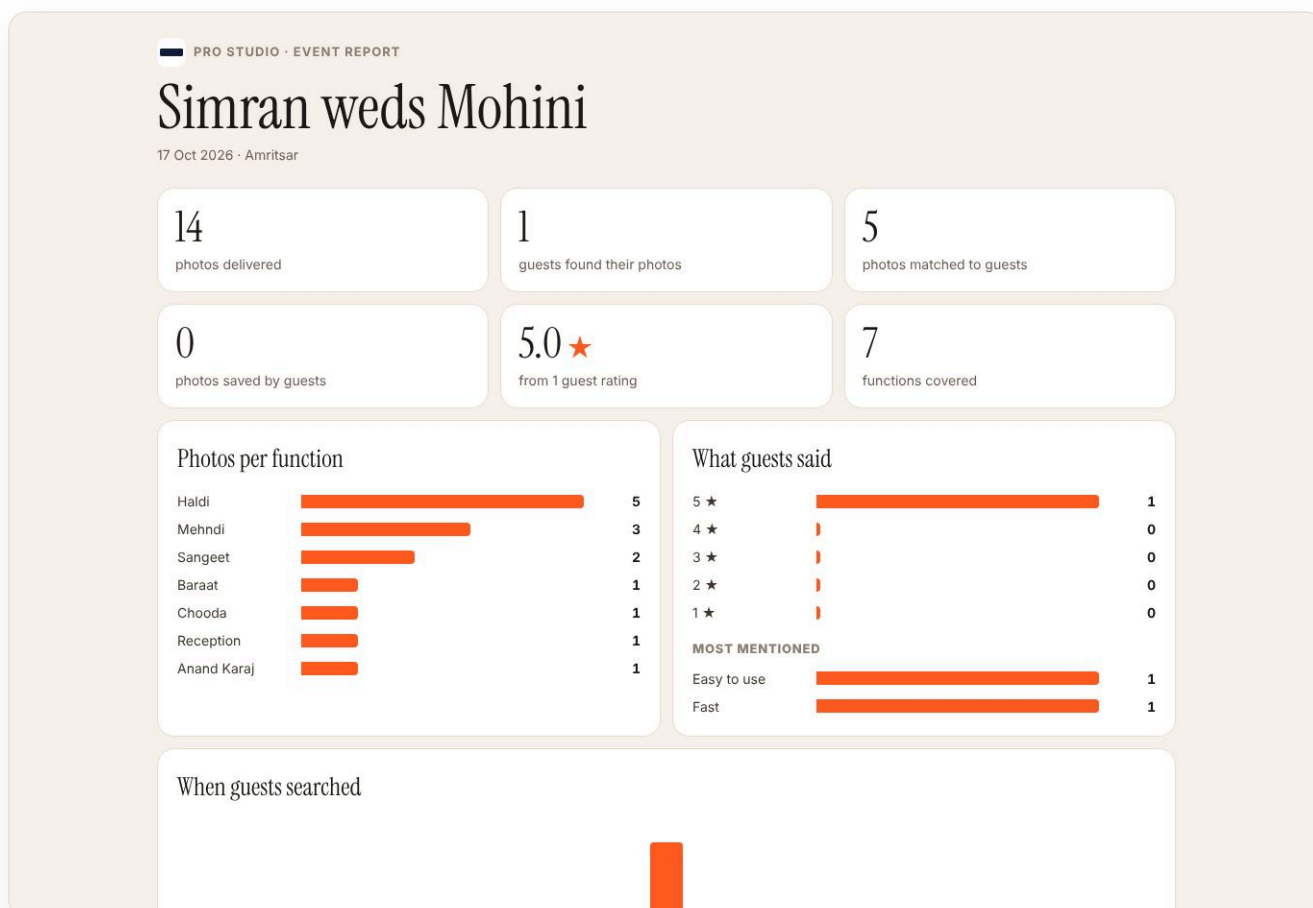

TIP

A dye-sub photo printer (Canon Selphy, DNP) prints a 4×6 in about a minute. Start Chrome with `--kiosk-printing` for one-click printing.

12

The *event report*

After every event, show what you delivered: photos, guests who found theirs, photos saved, ratings and what guests said. Share it with the couple in one tap.

01 Event page → Event report

Totals, photos per function, star ratings, most mentioned tags, when guests searched, guest notes.

02 Share with the couple

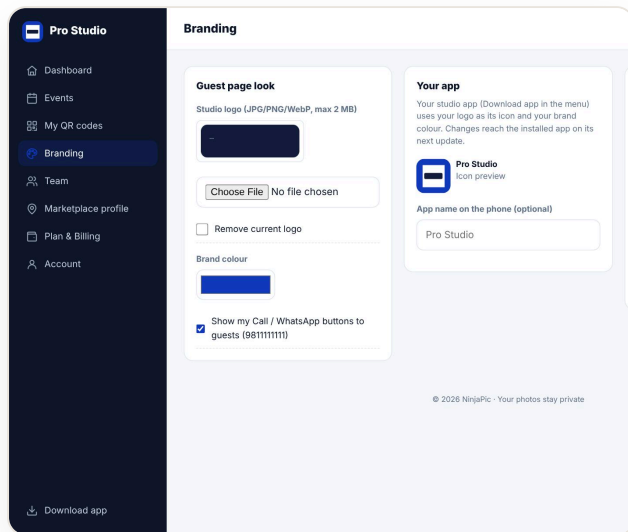

Makes a private link (switch it off any time).
Send it on WhatsApp with their album.

Use it to win the next client

"186 guests found their photos, 4.8★" is the best proof you can show a new couple. The studio part (prints, money collected, album opens, team photos) is visible only to you.

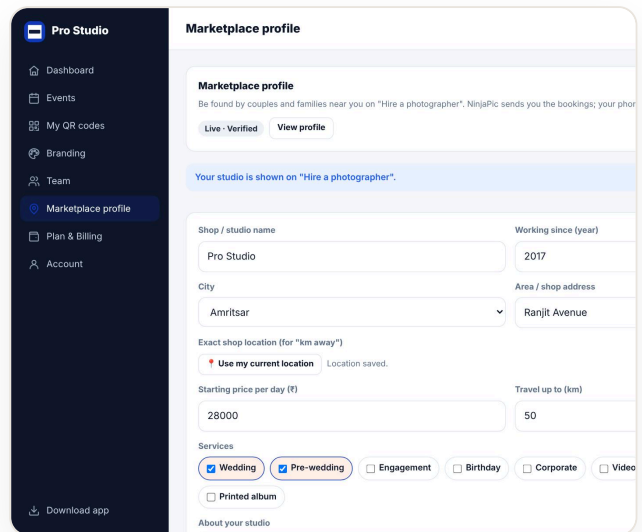

13

Your brand, *new clients*

Branding

Upload your logo and pick your colour: it shows on the guest page, the client album, the slideshow and your print designs. Set a watermark for guest downloads, choose if guests may save full-quality originals, and give the app on your phone your own name and icon.

Hire a photographer

Couples search ninjapic.com/photographers by city and see your shop, experience, starting price, services and best work. Quote requests come to NinjaPic and we pass genuine leads to you. Ratings come only from verified clients through the client album.

TIP

A complete profile with 6 strong photos and a clear starting price gets far more requests.

14

Tips, FAQ and *help*

Before the event

01 Day before

Create the event with its functions, put it on a QR, print the designs, and send the client album link + PIN to the couple.

02 At the venue

Upload the first 50–100 photos early (Haldi or the entry), start the slideshow, and tell the anchor to announce the QR.

03 After the event

Finish uploads, switch on photo selection for the album, and ask the couple for a review.

A guest can't find their photos?

Faces must be indexed. Keep the event page open after uploading until "Index faces" is gone. Good light and a straight face help.

Who can see all photos?

Only you, and the couple with the client album PIN. Guests on a private event see only photos with their own face.

Second shooter left the team?

Studio → Team → Switch off or Remove. Their photos stay in your events.

Can I reuse my printed QR?

Yes. End the event and put the next one on the same QR. The print stays the same forever.

How long do photos stay?

As long as your plan keeps them. Download your originals for your own archive.

Upload stopped halfway?

Finished photos are safe. Choose only the ones that did not finish: they are listed under the progress bar.
